## Makeup Water Tanks

HT-1167

Makeup water is fresh water added to a system to replace water lost due to evaporation, blowdown, leaks, or other processes. Makeup water is often used in cooling towers, boilers, and chilled or heated water loops. Maintaining a treated makeup water supply is crucial in supporting mission critical facilities with their cooling needs.

Makeup water can be treated with various measures including pH adjustment, solids removal, and softening to prevent scaling and corrosion. Utilizing high-quality makeup water increases the system's efficiency, improves the quality, and reduces costs.

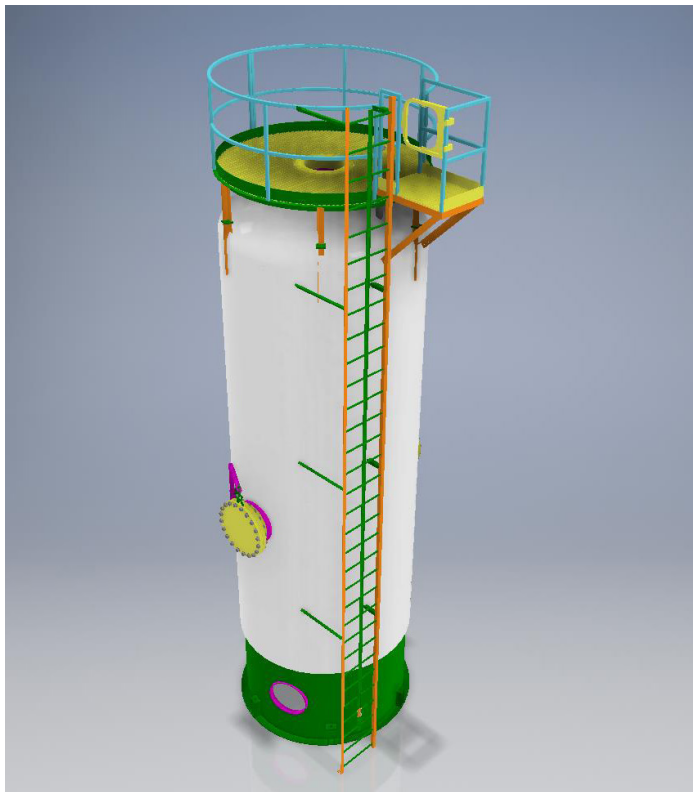

Highland Tank offers makeup water tanks ranging in size from 185 gallons to 70,000 gallons and either horizontal or vertical configurations to accommodate each site. The tanks can be outfitted with accessories, such as ladders, platforms, and walkways.

### Built to Meet Your Needs

- Standard and custom sizes
- Manways and fittings to meet project requirements
- Wide variety of accessories available
- Highland Tank can supply pumps, controls, level, and flow-sensing technology to monitor and manage the tanks

# Turnkey Solutions

## Makeup Water Tank Options & Accessories

### Tank Accessories

- Access Ladders
- Platforms

### Freeze Protection

- Factory Insulation
- Immersion Heaters
- Mixers
- Temperature Probes

### Level Management

- Floats
- Radar

### Control Panels

- PLC
- BMS
- Remote
