Bulk Storage Drums are designed to be practical and economical. They conveniently store more product in less space than 55-gallon drums and allow for bulk purchasing at lower prices. BDH tanks are helpful when limited height is desired.

Bulk Storage Drums are also available as a vertical tank and include a forklift entry feature for safe, easy handling. Both are built to UL-142 standards and are available in single-wall and double-wall designs.

**Standard Features**

- Superior steel welded design
- Welded fittings with plugs for shipping
- Primer paint
- UL-142 Listed
- 100% Product compatibility

**Typical Uses**

- Emergency gas storage
- Diesel generator storage
- Motor fuels
- Lubricants
- Waste oils

**Options**

- Saddle, skid or stabilizer supports
- Secondary containment dikes
- Pump platforms
- Pumps and dispensers

**Stabilizers**

Stabilizers are used to maintain the tank's position and are the simplest support system available from Highland. Stabilizers do not provide any clearance for visual inspection of the tank underside.

**Skids**

Skids provide portability for empty horizontal tanks, stabilize the tank and maintain a fixed elevation if being moved. Skids also provide clearance for visual inspection of the tank underside. Highland manufactures two styles of skids; Skids on tanks up to 1,500 gallons are fabricated from steel angle, and large tank skids are fabricated from steel pipe.

**Saddles**

Saddles are used to support the tank, maintain its position and elevation to provide clearance for visual inspection of the underside. Highland manufactures to the UL-142 two-saddle design standard that facilitates quicker, more trouble-free installations. Concrete pier construction information is available upon request. Standard saddles provide 6” of clearance and are available up to 12” high.
