

Built on Tradition

Highland Tank®

Flameshield® Tanks

HT-1102

The Flameshield® option is available on all UL-142 double-wall tanks manufactured by Highland Tank.

All tanks constructed with the Flameshield® option are manufactured to the strict STI specifications and are subject to the Steel Tank Institute's Quality Assurance program. Each carries the Flameshield® and SwRi 97-04 labels.

Because Flameshield® tanks are aboveground tanks, they can be relocated if necessary.

Flameshield® option tanks are available in a wide range of sizes from 240 - 70,000 gallons. Customized compartments, support systems, ladders, platforms, walkways, monitoring systems and many other options are also available.

Flameshield® Features

- Tight-wrap double-wall design
- 2-hour fire test - Meets SwRi 97-04 requirements for fire tested tank performance
- Built-in secondary containment
- Interstitial monitoring capability
- Horizontal, vertical and rectangular designs available
- Single or multi-compartment
- Capacities up to 70,000 gallons
- Built to nationally-recognized STI standards with strict third-party inspections
- Primary tank and secondary containment compatible with a wide range of fuels and chemicals
