

storage tanks

skid tanks

HT-1109

## PRODUCT DETAILS

Highland Tank's skid tanks are one of the most versatile solutions for your aboveground storage needs. Available in single or multi-tank modules, skid tanks require minimal installation, and relocation, if necessary, is fast and easy.

Highland skid tanks consist of UL-142 aboveground steel tank, mounted on support saddles and safely secured to heavy-duty skids.

All components are product compatible and possess the impermeability and strength of steel. They are ideal for the secure storage of petroleum, chemicals, hazardous wastes and fertilizers when temporary storage is needed.

Skid tanks are UL-142 labeled and meet NFPA 30 codes. Standard sizes, custom designs, special coatings and stainless steel fabrication are available

### Skids

- Used to provide portability for empty horizontal tanks
- Stabilize and maintain a fixed elevation if being moved by towing
- High under-tank clearance for visual inspection of tank's underside
- Does not require extensive site preparation

### Two skid styles:

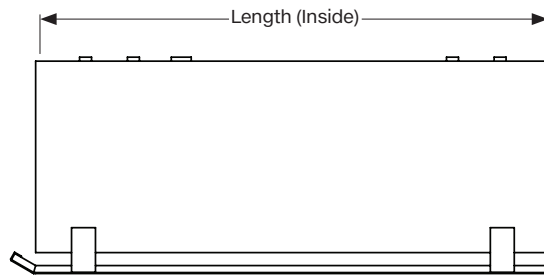

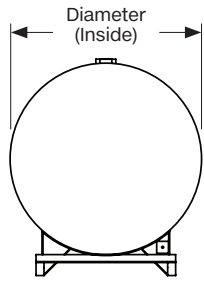

- Small skids for tanks up to 1,500 gallons with runners fabricated from steel angle
- Large skids with runners made from steel pipe

A wide array of options and accessories is also available. Designed, engineered and pre-fit ladders, platforms and walkways are available to customize a skid tank to your specific needs. These options can be fitted to the inside and outside of the dike and the outside of the tank.
