

## Grease Interceptors for Colleges and Universities

June 2021

Universities and colleges serve many meals and generate huge amounts of grease. Highland Tank's grease interceptors help prevent that grease from causing an obstruction in the sewer line.

Highland Tank is celebrating 75 years as a leader in the industry of manufacturing steel tanks. Steel is structurally stronger than alternative materials. We rely on steel to fabricate our grease interceptors which are engineered to prevent fats, oils, grease (FOG) and other harmful substances from entering the sewer system

Many institutions rely on grease interceptors to capture FOG and prevent all types of grease-related issues. There are about 5,300 colleges and universities with dining halls to serve roughly 19 million students across the United States. That many meals means a lot of grease.

The PGI series are gravity type grease interceptors and are available for both aboveground and buried applications. The cylindrical design allows for ease of maintenance.

Poly covers with safety grates under vehicle (H-20) rated grade level covers provide safety and protection against odor issues often associated with grease interceptors.

These grease interceptors are superior in strength and constructed of high-strength, mild carbon steel to UL and IAPMO/ANSI Z1001 standards. We offer many standard and custom configurations, starting at 300 gallons and up.

Our MGI series hydromechanical grease interceptors are smaller in volume in comparison to gravity type grease interceptors. Typically MGIs are located closer to the fixtures, protecting the building's drainage system. They are available in both carbon steel and stainless steel, from 15 GPM to larger units.

Our AGI series automatic grease interceptors are constructed of 304 stainless steel. Available in both on-floor and in-floor models in standard sizes from 15 GPM to larger units. Automatic grease interceptors are designed to skim trapped grease into an adjacent grease storage container, drum, or tank on a daily basis reducing costly maintenance fees.

Both our automatic grease interceptors and MGI series are sized in accordance with ASME A112.14.3, ASME A112.14.4, CSA B481.3 or PDI G101.
