### TITAN STRONG

For more than 20 years, Highland Tank’s Titan has proven to be an incredibly durable solution for underground fuel storage. In 2021, the marketplace has been shaken and stirred. America’s supply chain has been pushed to the limits and beyond in many industries.

The fuel storage market has been significantly affected. Retail fueling has been especially impacted by the availability of fiber reinforced plastic (FRP) fuel storage tanks.

However, the Titan is a viable option for the retail fuel industry to keep fueling stations up and running and new convenience stores built and put in operation.

The Titan is structurally superior to other tanks in the marketplace. The primary tank is made of steel. It is built to UL-58 standards, and no other tank fabricating material can match the strength of steel. The outer tank is manufactured from rigid, HMW polymer. Secondary containment is assured with its minimum 100 mil thick polymer jacket.

The tank also includes some of the most advanced techniques used for building underground fuel storage tanks. The inner steel tank features cascading shells.

The shells are also seal-welded internally. This allows for any moisture accumulation on the bottom of the tank to travel to the lowest point of the tank for easier maintenance. The bottom 60% of the tank is coated with a highly corrosion-resistant epoxy to provide even more protection.

The Titan tank is UL-1746 listed, offers complete secondary containment, and has a virtually damage-proof exterior with the polymer jacket. Highland Tank also supplies a 48" Bravo sump riser that mounts to a 42" sump collar that is seal-welded to the tank jacket.

Highland Tank's Titan is a strong choice for fuel storage at retail facilities. Contact Highland Tank to learn more about this durable jacketed double-wall underground storage tank with integrated sump.

#### TITAN® Features

- Sump collar seal-welded to tank jacket
- 48" Bravo sump riser
- Stainless steel monitoring pipe
- Cascading shell sections for complete water removal access
- Seal-welding and epoxy coating on bottom 60° of inner tank for added protection
- A 24" steel manway with choice of 1-5 fitting layouts for the manway cover
- Mounting kit for sump riser and a mixing tool for each site
