### UNDERGROUND STORAGE TANK OPTIONS

Convenience stores and other retail fuel facilities continue to expand operations and replace aging storage tanks. The supply chain has added obstacles to the growth of the C-store market.

Highland Tank's expansive production facilities and reliable supply of materials offer a way to keep store build-outs on schedule.

Our underground steel tanks provide superior structural strength and product compatibility. Our HighGuard and Titan underground tanks employ additional benefits that make them a great option for C-Stores.

The HighGuard tank is a double-wall steel storage tank protected by a dielectric coating of high solids polyurethane. This two-part coating provides a consistent 75 mils over the entire surface of the tank.

The superior strength of the HighGuard coating resists surface damage that can result from impact or abrasion that may occur during transportation, rigging, and installation.

HighGuard tanks are UL 58 and UL 1746 compliant and built-to-order, with custom designs from 300 to 50,000 gallons.

Titan Tanks are another underground storage tank option from Highland Tank. The Titan features a steel inner tank and an outer tank made of rigid polymer. This tank provides reliable fuel storage that meets UL 58 and UL 1746 standards.

Taking the tank to another level, Highland Tank adds a cascading shell design that allows for complete water removal. The bottom 60 degrees of the tank is seal-welded and coated with an epoxy internal coating for added protection. The Titan is also build-to-order, offering custom design from 300 to 29,600 gallons.

Both the HighGuard tank and the Titan are popular products for safe and reliable fuel storage at retail locations.

Contact a representative to see how Highland Tank can assist with your underground fuel storage products.
