### VIDEO: PASSIVE GREASE INTERCEPTORS

Highland Tank offers an extensive line of grease interceptors. Our Passive Grease Interceptors (PGI) are gravity flow grease interceptors that remove large quantities of sewer-clogging FOG and oily food waste before it is discharged in a municipal wastewater treatment system. PGIs are designed to help food service establishments and food production/processing facilities comply with EPA Sewer Pretreatment Regulations.

Designed to accept gravity flow, PGIs retain wastewater long enough to allow liquefied grease to cool, separate, and congeal. The video linked above demonstrates how the PGI works.

PGI sizing and construction conforms to plumbing codes and meets or exceeds most municipal FOG discharge requirements. Our PGIs are constructed from carbon steel for superior structural strength and impermeability.

Highland Tank offers standard design Passive Grease Interceptors. While the PGI in the video above is a triple-basin unit, PGI models are subject to vary depending on the Authority Having Jurisdiction. Please contact Highland Tank for assistance in finding the right PGI model for your application.
