MODULAR LINT INTERCEPTORS

Highland Tank offers modular lint interceptors that help prevent clogged sewer lines by keeping lint and other solids out of the plumbing system.

Highland Tank lint interceptors are installed on drain lines of industrial washing machines. They are designed to trap large quantities of sewer-clogging lint and other solids often associated with commercial laundries.

Highland Tank lint interceptors are constructed of stainless steel. These modular systems can be connected together in a series for more capacity.

The lint interceptor units are easy to install and easy to clean. Highland Tank lint interceptors are available for on floor or flush-in-floor installations with bolt on or hinged deck plate covers for ease of inspection and maintenance. Optional H-20 covers are available upon request.

Some applications for the lint interceptor:

- Hotels
- Prisons
- Laundromats
- Hospitals
- Universities
- Hair Salons

Call 814-893-5701 today or visit us at www.highlandtank.com for more information on grease interceptors.
