VERTICAL STORAGE TANKS

A key part of Highland Tank's mission is to develop long-term partnerships with our clients to work with them to solve their storage tank and process vessel needs. A Pennsylvania-based manufacturer of lubricants and additives has been a long-time customer of Highland Tank. This customer has a national footprint and serves many types of customers.

One model of their business is to serve as a fluid management partner to their customers to help isolate lubricant problems, identify supply inefficiencies and avoid costly lubricant outages. Another aspect of their business is manufacturing custom products to each customer's specifications.

They have more than three million gallons of bulk storage for raw materials and finished fluids. They have been expanding steadily for several years.

Most of their tanks are located indoors. They choose Highland Tank's vertical aboveground storage tanks for their facilities to maximize the amount of product storage in the available footprint.

These tanks are manufactured to UL-142 specifications. Highland's customer chooses a single-wall tank with a coned top and a flat bottom with 12" beams welded to the bottom. Many of the tanks are supplied with heating coils, and some have agitators mounted in the tanks.

Highland Tank's team works with the customer's team to help manufacture the tanks they design to facilitate the processes they require to produce their lubricant and additive products. This would include manufacturing multiple tanks with specific fitting arrangements based on the tank's place inside the facility. This is to allow for the customer's piping design within the building.

Highland Tank will work with customers to manufacture complex ladder, stairs, and platforms to connect a series of tanks. We manufacture a wide range of single or double-walled vertical tanks in carbon and stainless steel. Customers can choose from an open-top, cone or dished tops, and flat or dished bottoms. These tanks can sit on legs or a solid skirt to meet the requirements of the tank and the site. Every tank from Highland Tank is built to a customer's specific project to help make certain their needs are met.

Contact Highland Tank for help with your complex storage tank requirements.

Highland Tank provides a broad range of storage and wastewater treatment tanks complemented by outstanding technical support for a variety of applications.
