## SCALABLE TURNKEY FUEL MANAGEMENT SYSTEMS

Highland Tank recently completed a startup for a fuel dispensing and management system at a vehicle testing facility.

Highland Tank built a 5,000 gallon FIREGUARD® tank equipped with an HL-87 fuel dispensing package and a High-LINK® FuelShield Mini Plus. The FuelShield Mini Plus uses a barcode scanner for vehicle ID, driver ID, and to collect the project number. The system authorizes all three numbers against the database before starting the transaction. The High-LINK system also monitors all fuels for dispensing and inventory management.

The tank is a new addition to the site with the first tank systems being delivered in 2022. It is used to store diesel-based special fuels or diesel alternative special fuels. The Highland Tank team custom-designed the layout so that the height of the tank-mounted dispensing equipment would be accessible from the fueling lane that's at a higher elevation than the tank pad. It showcases our flexibility to meet various needs on-site. This project also highlights how High-LINK enables users to easily grow and scale their businesses.

Highland Tank is proud to offer custom solutions with the addition of High-LINK technology to enhance the value of our tanks and systems. Contact us for more information.
