SEPARATORS THAT MEET NPDES REQUIREMENTS

Airport expansions and upgrades often require updates to the stormwater drainage system. Highland Tank's oil/water separators are designed for gravity separation of petroleum hydrocarbons along with settleable solids from the wastewater.

These separators feature an oil/water separation chamber containing our high-performance Corella® inclined parallel plate coalescer with removable corrugated plates.

Highland Tank's oil/water separators meet National Pollutant Discharge Elimination System permit requirements. They range in size from 350 to 60,000 gallons and are built and tested to UL standards.

Call 631-935-3116 today or visit us at www.highlandtank.com for more information on wastewater treatment systems.
