DURABLE & RELIABLE UNDERGROUND FUEL STORAGE

Highland Tank's TITAN® tank is a technologically advanced underground storage tank. The technology used in this underground storage tank protection involves bonding, at every opening, a high molecular weight (HMW) polymer outer tank to a steel inner tank using high heat and pressure. The result is an extremely tough double-wall tank.

The TITAN® features seal-welded cascading shell sections for complete water removal access.

This allows for any moisture accumulation on the bottom of the tank to travel to the lowest point of the tank for easier maintenance.

The bottom 60% of the tank is coated with a highly corrosion-resistant epoxy to provide even more protection. An integrated sump collar is seal-welded to the tank jacket. This tank surpasses the performance standards of UL-1746.

TITAN® tanks are an excellent option for convenience stores. They are available in sizes ranging from 5,000 gallons to 29,600 gallons and can have multiple internal compartments. Contact us to learn more about this durable jacketed double-wall underground storage tank with integrated sump.
